

# MI:COP

## Automated Cyber Data Analytics & Risk-Scoring Dashboard Solution

A Solution By

### MI:COP

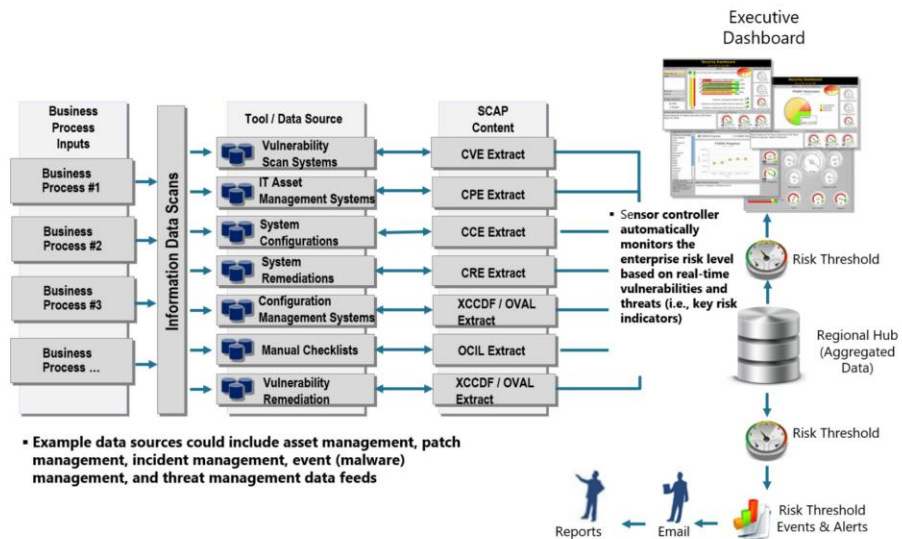

The concept of a cyber common operating picture (COP) is changing the game of information security. Now an "industry best practice" in Federal government and industry, implementing a cyber COP marks a shift from the traditional "snapshot in time" assessment process, to assessing and monitoring networks, systems, threats, and controls in "near real-time". This fresh approach to information security is focused on maintaining situational awareness of enterprise-wide information security controls and threats based on key effectiveness measures; and presenting/scoring those measures in a way that drives individuals to change their behavior – to focus more on managing risk based on impact to the mission.

### Mission Innovate Prepares You for the Future

Mission Innovate is at the forefront of the cyber common operating picture movement. We are a rapidly growing HUBZone small business and have invested significant time and resources to create a sophisticated MI:COP solution. Our solution is based upon considerable experience developing and implementing tailored solutions for Federal and commercial clients. Drawing from this experience, we are able to offer our clients unique insights and "lessons learned" for how to achieve enterprise-wide situational awareness.

### MI:COP Solution

Mission Innovate offers a fully customizable solution to realize a cyber common operating picture and achieve enterprise-wide situational awareness. A high-level view of our MI:COP solution is captured in the adjacent graphic.
